ABOUT OUR COMPANY & ITS SERVICES

Nowadays Ruby on Rails is widely accepted as a proven leader in the web development industry due to its easy, fast and efficient functioning if compared with other platforms. There is no surprise as the framework is based on one of the most flexible and adaptable languages. The company always keeps pace with modern trends and uses RoR as one of its priority frameworks in creating most applications.

Our professional team of 30+ developers is renowned for building exceptional RoR applications with focus on DRY (don't repeat yourself), COC (convention over configuration) and Agile methodologies. We use automated and manual code testing, code review and automatic deployment only when all the tests pass green. We provide Spree Commerce development, design and maintenance services as well.

TESTIMONIALS

// “Ikantam is absolutely the best! I would highly recommend them for any work. The team is very smart, creative, and full of great ideas. If you're looking for a team to do more than just execute exact requirements and rather help you develop requirements given their expertise in the e-commerce space then this is the team for you! Of course their execution is beyond excellent too. So all in all I'm a very satisfied client!”

Reham Fagiri / AptDeco.com

// iKantam took business deliverables and converted them in to technical requirements and implemented per our instructions. They took our vision and built a website that met our expectations.

We're really happy with the work they've done for us.

When compared with American developers, you cannot beat the quality of work iKantam provides for the price they charge.

Tyler McBeth / Vizibal.com

// I have worked with Paul and iKantam for almost a year now. Prior to working with them I either used my inhouse staff for simple projects or outsourced more difficult tasks to workers in India. After numerous dissapointments, I found iKantam via a friend and have used Paul and iKantam on 5 different projects each requiring different applications and technology. On each occasion I found Paul and his team more than up to the tasks set by me, and the end result far exceeded my expectations

Steven Grant / [Property Bangkok](https://PropertyBangkok.com)

// To Whom It May Concern: Working with Ikantam was a refreshing experience after we have tried several contractors. The overall impression was very positive: the communication was 100% clear, the budget was met, the work was done on a high level and minor discrepancies (which are inevitable in any kind of contract) were resolved quickly, professionally and in a good spirit. We are definitely recommending Ikantam to others and are planning to use them in our coming web projects
